**WILLIAMS INCIDENT - ABOVE THE CITY OF GLENDORA**

Yesterday, at approximately 5:11 p.m., a wildland fire started above the City of Glendora at the Angeles National Forest. As of this morning, the fire has grown to 1,500 acres and without any estimated containment time. The fire threatens structures in the Camp Williams area, and evacuations have taken place, but no known structures have been lost at this point.

Our Department provided 13 engines, 8 crews, 1 helicopter, and 1 dozer for structural protection and perimeter control yesterday. The Forest Service has requested 50 more engines for today, which will be provided through Region 1. The fire is approximately 2 miles from our Department's jurisdiction; therefore, we will be entering into unified command with the United State Forest Service this morning.

I will keep you apprised of further developments. If you have any questions, please call me.
